SUMMARY

Data Analyst with 3+ years of experience building SQL and Python pipelines, developing Power BI and Tableau dashboards for business stakeholders, and resolving data quality issues across reporting systems. Advanced Excel and SQL, with production experience delivering AI-driven analytics workflows using the Claude API.

EDUCATION

The University of Texas at Dallas

Master of Science, Business Analytics & AI

Dallas, TX

Aug 2024 to May 2026

- Coursework: Machine Learning, AI for Business, Statistical Analysis, Database Management, Python for Data Science

Parul University of Engineering and Technology

Bachelor of Technology, Information Technology

Gujarat, India

Aug 2019 to May 2023

PROFESSIONAL EXPERIENCE

Data Analyst

May 2025 to May 2026

Crow Museum of Asian Art

Dallas, TX

- Consolidated 5 source systems into a single reporting layer using SQL and Python, replacing the separate manual exports each team maintained and giving Finance and Operations one consistent set of numbers to work from.
- Built ETL workflows with automated validation across those systems, catching 200+ data discrepancies at the source rather than after they surfaced in stakeholder reports and required correction downstream.
- Automated recurring reporting in Python and Claude API, converting a multi-hour weekly assembly process into a scheduled pipeline and recovering 35% of analyst time for ad hoc requests from leadership.

Data Analyst

Jul 2022 to Jun 2024

Digiflutters Technologies

Gujarat, India

- Cut reporting cycle time by 45% across 4 client accounts by replacing manual consolidation with SQL and Python pipelines, standardizing how data from separate source systems reached each client's reporting layer.
- Shipped 12+ Power BI and Tableau dashboards tracking KPIs across marketing, product, and operations, presenting weekly findings to client stakeholders and adjusting reporting as their priorities shifted.
- Segmented 75K customer records to identify high-value cohorts and the behavioral signals preceding churn, informing how one client reprioritized retention spend across its most valuable customer groups.

PROJECTS

DRIP, Financial Risk Intelligence Platform | *Python, SQL, Claude API, Snowflake, Tableau*

- Built a production platform in Python and SQL scoring 100 monitored assets and \$124B+ in exposure across code safety, drawdown, volatility, concentration, and liquidity, surfacing high-risk entities for live users.
- Automated exposure tracking and threshold alerting in Python, replacing manual screening with real-time Tableau dashboards that flag breaches as they occur rather than surfacing them at period end review.

HeartAI Platform, Clinical Data Engineering Pipeline | *dbt, Snowflake, PostgreSQL, Python, SQL*

- Delivered an analysis-ready dataset to a clinical AI team by building a dbt and Snowflake pipeline with medallion architecture, consolidating fragmented PostgreSQL records on a daily batch schedule.
- Implemented dbt tests and documentation standards across all layers with Git version control, catching schema and null-value issues in staging before they reached the models downstream teams relied on.

Order Fulfillment SLA Monitor & Seller Scorecard | *SQL, Python, Power BI, Excel*

- Traced a 12-point drop in customer review scores to seller handoff delay and carrier transit variance by analyzing 99K marketplace orders in SQL, ruling out order volume as the driver teams had assumed.
- Replaced monthly aggregate review with a weekly Power BI scorecard flagging SLA breaches, with drill-through from breach to individual order so operations could act on specific sellers instead of trends.

TECHNICAL SKILLS

Querying & Analysis: SQL (Advanced), Excel (Advanced, Pivot Tables, XLOOKUP, SUMIFS), Large Dataset Analysis

Programming: Python (Pandas, NumPy, Scikit-learn), dbt, ETL Pipelines, Data Validation, Automation

BI & Visualization: Tableau, Power BI, Dashboard Development, KPI Reporting, Data Storytelling

Data Engineering: Data Pipelines, Medallion Architecture, Data Modeling, Snowflake, PostgreSQL, Git, GitHub

AI & Platforms: Claude API, Agentic AI, LLM Integration, Google Cloud Platform, Jupyter Notebook, Agile
